A;Description: dissolves the fibrin of blood clots; acts as a proteolytic factor in ns the walls of the graafian follicle; also activates the urokinase-type plasminogen

C; Superfamily: plasmin; kringle homology; plasminogen-related

protein

A; Pathway: fibrinolysis

C; Function:

```
plasmin (EC 3.4.21.7) precursor - rhesus macaque C;Species: Macaca mulatta (rhesus macaque) C;Date: 31-Mar-1989 #sequence_revision 31-Mar-1989 #text_change 22-Jun-1999 C;Accession: B32869; B30848

C;Comment: Plasminogen is synthesized by the kidney and is present in plasma and many C;Comment: Plasminogen is converted into plasmin by plasminogen activators, both plasmediately after dissociation from the clot. In the presence of the inhibitor, the activation involves also removal of the activation peptide. C;Comment: Stromelysin 1 (see PIR:KCMSS1) acts on plasminogen to produce angiostatin. C;Function:
                                                                                                                                                                                                                                                F;103-181/Domain: kringle homology <KR1>
